INDEX TO VOLUME 42

SUBJECTS

(N) denotes Note on Experimental Technique and Apparatus, (L) Letter to the Editor

Absorption of water vapour by epoxy resin cement (N) 501
Acoustics and ultrasonics at Physics Exhibition 519
Adsorption, of gases, measurement from low to high pressures (N) 821
Adsorption studies on evaporated films, isolation trap (N) 49
Aeration meter for lubricating oils 425
Airlock and specimen stage for demountable electron optical systems (N) 898
Altimeter, aircraft, GaAs laser range finder for 541
Aluminium evaporation source (N) 722
Amplifier, electrometer, for scanning spectrometers (N) 126
Amplifier, transistor, for registration of ion current portion of Langmuir probe characteristic 399
Amplifier for use with selenium photovoltaic cell and digital voltmeter (N) 434
Amplitude measurement at low frequencies, digital method 265
Analogue, electrical, of thermally controlled air volume 787
Analogue, mechanical, of magnetic films with uniaxial anisotropy (N) 165
Analysis, non-dispersive, modification of Philips PW 1540 x-ray spectrometer 480
Analysis, qualitative, of ferroelectric samples, modified Sawyer and Tower circuit for 696
Anemometer, low speed (N) 349
Anemometer, low speed, direct reading (N) 811
Anemometer, portable, with photoelectric switching 414
Anticontamination stage for Siemens Elmiskop I (N) 767
Anvil apparatus, tetrahedral, pressure generation in (L) 771
Aqueous materials, 80 Mc/s electron spin resonance spectrometer for (N) 505
Arc, vacuum, initiation, device for study (N) 284
Atmosphere, temperature measurement by rocket sonde 733
Atmospheric absorption and systematic errors in spectroscopy 418
Atomic beams, hydrogen, magnetic velocity selector for 489
Atomizer, adjustable, for atomic absorption spectroscopy (N) 816
Automatic control of twin-T bridge used for nuclear magnetic resonance measurements 449
Automatic frequency control for X-band reflex klystron of electron spin resonance spectrometer (N) 442

Bacterial growth, recording nephelometer for study (N) 664
Balance, torsion, *see* Torsion balance
Beams, proton or electron, measurement of current density (N) 899
Beryllium window for x-ray work, demountable bakeable mechanically sealed vacuum-tight (N) 39
Biological research, physical instruments in (Exhibition discourse) 547
Biological system, importance of signal-to-noise ratio in measuring small signals 470
Boiler for flow calorimetric experiments 794
Bolometers, large-area, of evaporated gold 19
Bombardment *see* Electron bombardment
Bridge, a.c., self-balancing and recording, for Beeck-type adsorption calorimeter 198
Bridge, twin-T, for nuclear magnetic resonance measurements, automatic control 449
Bridgman crystal growing technique, modification of quartz container (N) 55
Bubble meter method of gas flow measurement, photoelectric timer for (L) 175

Cadmium sulphide crystals, application of ohmic contacts for Hall measurements (N) 51
Calibration system, magnetic field (N) 341
Calorimeter, adsorption, Beeck-type, a.c. bridge for 198
Calorimeter for graphite dose rate in advanced gas-cooled reactors 576, corr. 773
Calorimeter for liquid metal solution 192
Calorimeter, reaction, aneroid semi-micro 186
Calorimeter, Smith, improved method of evaluating thermal data (N) 48
Calorimetry, flow, boiler for experiments 794
Camera, electron diffraction, roll-film holder for (N) 280
Camera, streak, image tube 535
Camera, x-ray diffraction, *see under* X-ray diffraction
Cams, scribing for programme temperature controllers (N) 54
Carbon dioxide, high precision isotropic analysis of oxygen and carbon 689
Carbon foils, self-supporting, production (N) 753
Casting of low exotherm epoxy resin (N) 719
Cathodes, tungsten, spherical, method for making (N) 161
Cell *see* Crystal cell
Cement, *see* Epoxy resin cement
Chromatography, column, pressure-regulating device (N) 296
Chronometer, synchronous slave device for timing random events (N) 443
Circuit, quenching, for self-quenched, Geiger–Müller counters (N) 125
Circuit, Sawyer and Tower, modified for investigation of ferroelectric samples 696
Circuit, transistor sweep, for superconducting solenoid (N) 293
Circuit, voltage comparator, modification for resistivity measurement (N) 432
Cloud chamber, triggered, for investigation of low energy nuclear reactions induced by charged particles 856
Cloud point determination, semi-automatic apparatus for 708
Coating, vacuum, cleaning of coating units (N) 281
Coil, superconducting, 30 kG, 8½ in. bore (L) 913
Collimator coupling for Philips x-ray tube shield (N) 763
Compression of sample on to microscope stage (N) 172
Computer, correlation function, using delta modulation techniques 529
Computer control systems, instrumentation problems in (Exhibition discourse) 551
Computer devices, superconducting, Conference, London, December 1964 133
Computer indexing of x-ray powder diffraction patterns (N) 171
Concrete, microcrack detection by photoelastic method 276, (L) 509
Conductance, of liquids, measurement by a.c. methods 742
Conductance changes during fast ionic reactions in solution, apparatus for studying 869
Conductivity meter, mean, for use in turbulent jet (N) 163
Conductors, liquid, measurement of Hall coefficient 256
Conference reports:
  Electron Probe X-ray Microanalysis, Delft, September 1964 57
  Fundamental Problems of Low Temperature Measurements, National Physical Laboratory, September 1964 7
  Interference and Coherence, Sydney, Australia, August 1964 1
  Microelectronics, Munich, October 1964 61
  Optics in Process Control, Manchester, January 1965 181
  Photographic and Spectroscopic Optics, Tokyo and Kyoto, September 1964 3
  Superconducting Computer Devices, London, December 1964 133
Contact potential, measurement by electrostatic excitation of l.f. vibrations 873
Contact potential, thermal modulation, for polar vapour detection 624
Contamination of metal films, all-glass trap or prevention (N) 49

Control, automatic, *see* Automatic control
Control, process, *see* Process control
Control systems, computer, instrumentation problems in (Exhibition discourse) 551
Control systems, temperature, design criteria for 787
Controller, programmed, automatic, for sequential laboratory operations 650
Controller, temperature, linear proportional (N) 822
Converter, temperature-to-frequency, linear 611
Cooling, slow, programmer for (N) 770
Correlation function computer, using delta modulation techniques 529
Corrosive solutions, flow-inducer pumps for circulation (L) 446
Coulometer for studying protonic conduction in crystals 889
Coulter counter, suspension of particles for analysis (N) 711
Coulter counting, stirring rate effects (N) 891
Counter tube, Geiger–Müller, thin-windowed for counting of tritium (N) 906
Counters, Geiger–Müller, calibration for measuring neutron dosimetry 248
Counters, Geiger–Müller, self-quenched, fast quenching circuit for (N) 125
Counting, accurate, of short-lived activities by repetitive activations 621
Crack detection, micro, in concrete, photoelastic method 276, (L) 509
Craftsmanship competition 1965 364
Cryopump system for laboratory evaporator (N) 894
Cryostat, ^{3}He, for specific heat measurements between 0·4 and 4·2°K 421
Cryostat, inverted, liquid argon (N) 41
Cryostat for laboratory use (N) 291
Cryostat, liquid-air, for tensile testing 705
Cryostat, metal, sealed-off, pumpable vacuum valve for (N) 724
Cryostat, sensitive liquid nitrogen level detector for (N) 438
Crystal cell, photograph method of determining size, shape and orientation 808
Crystal growth, novel design of mould (N) 712
Crystal orienting device (N) 826
Crystal puller, syringe, for materials having a volatile component 883
Crystal pulling, linear ratemeter for 153
Crystal pulling, single, without temperature programming (N) 361
Crystals, calcium tungstate, preparation by floating zone recrystallization technique 114
Crystals, graphite, microbeam camera for study 337
Crystals, single, coulometer for measuring protonic conduction (N) 889
Crystals, single, growth, novel design of mould (N) 712
Crystals, single, metallic and ionic, strainfree cutting method 631
Crystals, single, orientation for x-ray diffraction, manipulating device 483
Crystals, single, oriented, x-ray diffraction photographs at temperatures up to 1800°C (N) 658
Crystals, single, pulling without temperature programming (N) 361
Crystals, spherical, photograph method of determining size, shape and orientation of unit cell 808
Current, transient, measurements in 10 A–10 kA range, 1 Gc/s bandwidth shunts for 278
Current density in charged particle beams, method of measurement (N) 899
Current switching device (N) 659
Curve reader, automatic digital (N) 356

Data processing and correlation, at Physics Exhibition 523
Deformation studies, method of printing grids on to metal surfaces (N) 896
Density, *see* Microdensitometer
Detector, coherent, wide-band, use of sampling oscilloscope for (N) 358
Detector, phase-sensitive 474
Dielectric constant, of liquids, measurement by a.c. methods 742
Dielectric properties, microwave, of weakly polar liquids, measurement 37
Diffraction patterns, photographic film for recording 116
Diffractometry, quantitative, of x-ray transparent specimens (L) 298
Digital curve reader, automatic (N) 356
Digital integrator, multichannel 532
Digital method of measurement of amplitude and phase at low frequencies 265
Dilatometer, Fizeau, for irradiated specimens 24
Diode mount, low temperature laser demodulator, for high frequency operation (N) 757
Diodes, silicon, lithium drifted, as nuclear radiation detectors 862
Displacements, measurement at temperatures up to 650°C (N) 52
Domain boundaries, ferromagnetic, technique for studying 885
Domain examination, method of preparing Si–Fe surfaces (N) 170
Dosimetry, neutron, *see* Neutron dosimetry
Droplets, liquid, uniform-sized, production 635

Echelle grating, wave front study by gas laser (N) 437
Educational exhibits at Physics Exhibition 520
Elasticity, *see* Rigidity, flexural
Electrical equipment, measurement of local power dissipation 90
Electrochemical determination of hydrogen in inert gas mixtures 693
Electrochemistry, log current density–potential curves recorder for (N) 294
Electrometer voltmeter, hybrid (N) 655
Electron bombardment ion source for isotopic analysis of solids 806
Electron diffraction, low energy, grids for (N) 755
Electron diffraction, low energy, specimen manipulator (N) 887
Electron diffraction, scanning, with energy analysis 305
Electron diffraction, tilted specimen holder for (N) 716
Electron diffraction camera, roll-film holder (N) 280
Electron distribution in Philips EM200 electron microscope 681
Electron gun, revolving multiple, for use in deposition of thin polymer films (N) 812
Electron microscope, double-tilting heating stage 853
Electron microscope, goniometer stage, liquid helium cooled 268
Electron microscope, Hitachi Hu-11A, Lorentz attachment for low chamber 31
Electron microscope, Philips EM200, distribution of electrons striking specimen 681
Electron microscope, Philips EM200, goniometer-type specimen holder (N) 129
Electron microscope, scanning, determination of area of emission of reflected electrons 158
Electron microscope, Siemens Elmiskop I goniometer specimen holder and anticontamination stage for (N) 767
Electron microscope specimen holder, goniometer-type, for Philips EM200 (N) 129
Electron microscopy, imperfection analysis, production of large Si films for 270
Electron microscopy, scanning, high resolution 81
Electron microscopy, tilted specimen holder for (N) 716
Electron microscopy, transmission, preparation of disk foils (N) 435
Electron microscopy, transmission, twin-jet technique for thinning metals for (N) 354
Electron optical systems, airlock and specimen stage for (N) 898
Electron probe, high resolution scanning electron microscope to produce 81
Electron probe x-ray microanalysis, conference, Delft, September 1964 57
Electron spin resonance spectra, *see under* Spectra
Electron spin spectrometer, *see under* Spectrometer
Electronic devices and transducers at Physics Exhibition 517
Electronics, *see also* Microelectronics
Electrostatic deflection of tensioned grid wires 584
Electro-thinning of specimens for transmission electron microscopy, twin-jet technique (N) 354
Epoxy resin, low exotherm, casting (N) 719

Epoxy resin cement for absorption of water vapour (N) 501
Evaporation of aluminium (N) 722
Evaporation rate, vacuum, control by use of constant source current 144
Evaporator, laboratory, cryopump system for (N) 894
Exposure meter using vacuum photocell (N) 168
Extensometer, recording optical (N) 727

Fatigue testing, low frequency sinusoidal, in tension, apparatus 273
Ferrimagnetic materials, polishing and grinding apparatus for spheres (N) 761
Ferroelectric samples, investigation, modified Sawyer and Tower circuit for 696
Ferromagnetic domain boundaries, techniques for studying 885
Ferromagnetic films, Lorentz microscope for study 31
Fibre friction, device for measurement (L) 771
Fibre structures, x-ray diffraction photographs, studied by optical-diffraction techniques 533
Field index of d.c. magnetic fields, instrument for measuring (N) 892
Field-ion microscope 543
Field-ion microscope, all-metal 645
Film balance for use with Langmuir trough (N) 359
Films, evaporated, isolation trap for adsorption studies, (N) 49
Films, photographic, high intensity-range, for diffraction and spectrographic work 116
Films, thin, apparatus for measurement of magnetization 410
Films, thin, measurement of mechanical hysteresis and stress relaxation in (N) 762
Films, thin, metal, method for cutting accurate line patterns (N) 120
Films, thin, metal, as sensitive elements in bolometer 19
Films, thin, polymer, deposition with use of revolving multiple electron gun (N) 812
Films, thin, polymer, measurement of flexural rigidity 591
Films, thin, Si, for preselected imperfection analysis, method of production 270
Films, thin, spread on Langmuir trough, film balance for study (N) 359
Films, thin, unbacked, preparation (N) 286
Films, thin, *see also* Coating, Ferromagnetic films, Foils, Magnetic films
Filters, x-ray, of strontium (N) 754
Flow, effects of tilting Ostwald viscometer on time measurements 317
Flow, gas, *see* Gas flow
Flow, wake geometry studied with transducer 497
Flow birefringence, rotor unit for measuring over wide range of temperatures 880
Flow calorimetry, *see* Calorimetry, flow
Flow-inducer pumps for use in deaerated systems (L) 446
Flow rates, *see* Flowmeter
Flow, *see also* Viscometer
Flowmeter, fibre, for very low flow rates 797
Flowmetering by a motion-induced magnetic field 406
Fluorescence decay, measurement 603
Foils, carbon, self-supporting, production (N) 753
Foils, disk, for transmission electron microscopy, preparation (N) 435
Force, 12×10^{-8} dyn, detection by torsion balance 150
Fraction collector, simple (N) 721
Fracture of samples in Ferranti–Shirley viscometer, viewing method (N) 162
Freezing point cell for volatile solutions (N) 665
Frequency, conversion from temperature 611
Frequency stabilizing system, X-band 118
Friction, in fibres, device for measurement (L) 771
Friction, internal, of metals, computer calculation of strain dependence (N) 814
Fringe displacement in gauge interferometer, measurement (L) 298
Fringes, moiré, measuring system with constant grating gap 156
Fringes, 'turned-edge', in Twyman–Green interferometer due to focusing errors (N) 897
Fuel cell, laboratory demonstration (L) 131
Furnace, graphite, 3000°C, for laboratory use (N) 710
Furnace, molybdenum element, power supply for (N) 663

Gamma radiation detector, airborne, use of plastic scintillator (L) 772
Gas, inert, method of purification (N) 900
Gas, volumetric determination, microvolumetric device and combined Toepler pump 28
Gas adsorption, measurement from low to high pressures (N) 821
Gas analysis apparatus, mass spectrometer for 486
Gas cell, infra-red, variable temperature, using semiconductor heat pumps 326
Gas chromatography, injection port and column holder (N) 47
Gas circulation pump, small (N) 444
Gas compressor, mercury-piston, for use at high pressures 642
Gas content of liquids and semi-liquids, measuring apparatus 639
Gas flow measurement, bubble meter method, photoelectric timer for (L) 175
Gas lasers, *see* Lasers, gas
Gas pipette, all-metal, for use in mass spectrometry (N) 121
Gas saturator for liquids: centrifugal glass circulation pump (N) 662
Gas–solid interactions, torsion balance to detect force of 2×10^{-8} dyn 150
Gauge, liquid depth, using variable frequency transducer 545
Generator, pulse, for driving GaAs lasers at room temperature (N) 123
Glass, optical, measurement of spectral transmission 746
Glass microelectrode puller, electro-pneumatic (N) 723
Goniometer specimen holder for Siemens Elmiskop I (N) 767
Graphical method of integration (N) 345
Graphite dose rate in advanced gas-cooled reactors, calorimeter for 576, corr. 773
Graphite furnace, 3000°C, for laboratory use (N) 710
Graticule, microscope-eyepiece, for particle counting and sizing (N) 500
Gravity meter, Heiland, for tidal gravity recording, phototransistor transducer for 140
Grid wires, tensioned, electrostatic deflection 584
Grids, as electrodes for low energy diffraction system (N) 755
Grids, method of printing on to metal surfaces for deformation studies (N) 896
Grinding apparatus for ferrimagnetic spheres (N) 761
Gun, electron, *see* Electron gun

Hall coefficient of liquid conductors, measurement 256
Hall coefficient of polycrystalline metal, accurate determination 465
Hall measurements, application of ohmic contacts to CdS crystals (N) 51
Hall measurements, calculators for (N) 908
Heat flow meter, stagnation point 260
Heat flow studies, one-dimensional, hydraulic iterative device for 263
Heat pumps, semiconductor, for thermostatically controlled infra-red gas cell 326
Helmholtz coils, double, used in superconducting magnet (N) 766
High pressure, mercury-piston gas compressor for 642
High-pressure apparatus, compressible-gasket, choice of materials for 374
High pressure, *see also* Shock tubes
High temperature, attachment for x-ray diffractometer at 212
High temperature, measurement of spectra (N) 756
High temperature, measurement of thermoelectric properties at 209
High temperature, 3000°C graphite furnace for laboratory use (N) 710
Hydraulic iterative device for one-dimensional heat flow studies 263
Hydrogen in inert gas mixtures, electrochemical determination 693

Hydrogen atom beams, magnetic velocity selector for 489
Hysteresis, mechanical, in adsorbed surface films, measurement of (N) 762

Image tube streak camera 535
Industry, low pressure measurement in, review 63
Inert gas mixtures, hydrogen in, electrochemical determination 693
Infra-red gas cell, variable temperature, using semiconductor heat pumps 326
Infra-red process analyser based on interference filters 526
Infra-red reflectometer with a spheroidal mirror 385
Infra-red spectrophotometer cells, drying apparatus for (N) 164
Instrument industry at Physics Exhibition 514
Instrumentation problems in computer control systems (Exhibition discourse) 551
Instrumentation in process and product control in textile industry (Exhibition discourse) 557
Instruments, physical, in biophysical research (Exhibition discourse) 547
Integration, graphical method (N) 345
Integrator, digital, multichannel 532
Integrator for multichannel potentiometric recorders 615
Interference and coherence, conference, Sydney, Australia, August 1964 1
Interference filters, tunable, with narrow bandwidths 334
Interferometer for detection of small shifts in wavelength of spectral lines emitted by plasmas and for measuring the shift/line width ratio 829
Interferometer, echelle grating, gas laser for studying wave front (N) 437
Interferometer, gauge, measurement of fringe displacement in (L) 298
Interferometer, laser, for use in fluid mechanics 834
Interferometer, Mach–Zehnder, laser as light source for (N) 282
Interferometer, Mach–Zehnder, 6 in., design 231
Interferometer, microwave, for measurement of small phase angles 225
Interferometer, radial shear, for testing microscope objectives 102
Interferometer, Twyman–Green, 'turned edge' fringes due to focusing errors (N) 897
Interferometer end mirrors, possible immunities (N) 823
Ion current measurement in mass spectrometry, servo-amplifiers for 390
Ion source, electron bombardment, for isotopic analysis of solids 806
Ion source in mass spectrometer, piezoelectric vacuum vibrator 136
Ionic reactions in solution, apparatus for studying conductance charges 869
Ionization chamber, spherical, for study of saturation characteristics 800
Ions, fragment, kinetic energy measured with radio-frequency mass spectrometer 461
Irradiated specimen, Fizeau dilatometer for 24
Irradiation, short-lived, accurate counting by repetitive activation 621
Isotropic analysis, high precision, of oxygen and carbon in CO_2 689
Isotropic analysis of solids, electron bombardment ion source for 806

Kinetic energy of fragment ions measured with radio-frequency mass spectrometer 461
Klystron, with reflex, X-band, of e.s.r. spectrometer, automatic frequency control (N) 442

Laboratory operations, sequential, automatic programmed controller for 650
Langmuir probe characteristic, with predominant ion current, transistor amplifier for registration 399
Lapping device for preparation of thin samples of highly brittle materials (N) 713
Laser interferometers for use in fluid mechanics 834
Laser range finder, Barr and Stroud 536
Laser range finder, GaAs, as aircraft altimeter 541
Lasers, GaAs, pulse generator for driving at room temperature (N) 123
Lasers, gas, for studying wave front from an echelle grating (N) 437
Lasers as light source for Mach–Zehnder interferometer (N) 282
Lasers and optical devices at Physics Exhibition 516
Lasers, *see also* Masers, optical
Lattice parameter measurements, high temperature attachment for x-ray diffractometer 212
Leaf measurement, airflow planimeter for 428
Level controller, liquid nitrogen, for cold traps (N) 717
Level detector, cryoscopic (N) 347
Level detector, liquid nitrogen for use in cryostat (N) 438
Level indicator for cryogenic liquids (N) 351
Level sensing device, for mercury, photoelectric (N) 439
Light flux, 10^{-12} to 10^{-6} lumen, fast response detectors for (N) 430
Light modulation at extreme frequencies (L) 729
Light transmission changes for determination of melting points (N) 167
Liquid conductors, measurement of Hall coefficient 256
Liquid depth and tank content gauge using variable frequency transducer 545
Liquid droplets, uniform-sized, production 635
Liquid level indicator for cryogenic liquids (N) 351
Liquid metal calorimeter, with liquid metal and solvent 192
Liquid nitrogen level controller for cold traps (N) 717
Liquid nitrogen level detector for use in cryostat (N) 438
Liquid nitrogen refill systems, automatic, thermally operated valve for (N) 128
Liquid velocity meter, cold tip (N) 657
Liquids, circulating, in laboratory apparatus, thermostatic control (L) 363
Liquids, conductance measurement 742
Liquids, dielectric constant measurement 742
Liquids, gas saturator: centrifugal glass circulation pump (N) 662
Liquids and semi-liquids, gas content, measuring apparatus 639
Liquids, weakly polar, measurement of microwave dielectric properties 37
Low frequencies, amplitude and phase measurement at, digital method 265
Low pressure measurements, fundamental problems, conference, National Physical Laboratory, September 1964 7
Low pressure measurements from industrial viewpoint, review 63
Low pressure measurements, single crystal SiC thermistors for (N) 342
Low pressure measurements, wide range Pirani gauge, with ambient temperature compensation 77
Low temperature diode mount, for high frequency modulation (N) 757
Low temperature level detector (N) 347
Low temperatures, liquid level indicator (N) 351
Low temperatures, *see also* Liquid nitrogen
Lubricating oils, aeration meter for 425
Luminance distribution of sky, scanner for continuous recording (N) 903

Magnet, with stepped gap, analysis of magnetic field variations 98
Magnet, superconducting, using double Helmholtz coils (N) 766
Magnetic anisotropy measurements, sample holder for (N) 760
Magnetic field calibration system (N) 341
Magnetic field experiments, Lorentz attachment for electron microscope 31
Magnetic field variation in magnet with stepped gap, analysis 98
Magnetic fields, d.c., instrument for measuring index (N) 892
Magnetic film, apparatus for quasi-static and dynamic measurements 410
Magnetic film with uniaxial anisotropy, mechanical analogue (N) 165
Magnetic probe, *see* Probe, magnetic
Magnetic susceptibility, Sucksmith ring balance for, improvement 328

Magnetism, *see also* Domain
Magnetometer, nuclear magnetic resonance, for range 11–65 Mc/s 865
Magnetometer, torque, for wide range of temperatures 322
Manometer, differential bakeable bellows-type null-reading (N) 344
Manometer, McLeod, linear-scale method of using (L) 773
Manometer for measuring pressures in range 1–400 μmHg (N) 160
Manometer, multi-tube, for measurement of small pressure differences 744
Manometer, oil, for range 0–100 torr (N) 290
Manometer, photoelectric mercury level sensing device (N) 439
Manometer, *see* also Micromanometer
Martensitic transformation, technique for determination of temperature of onset 111
Masers, optical, mirror mounts for (N) 499
Masers, optical, *see also* Lasers
Mass spectrography, spark-source, recording technique for improvement of detection limits 339
Mass spectrometer, for gas analysis apparatus 486
Mass spectrometer, for high-precision isotopic analysis of oxygen and carbon in CO_2 689
Mass spectrometer, piezoelectric vacuum vibrator as source of ions 136
Mass spectrometer, radio-frequency, Bennett-type, performance 455
Mass spectrometer, radio-frequency, for measuring kinetic energy of fragment ions 461
Mass spectrometry, all-metal gas pipette for (N) 121
Mass spectrometry, servo-amplifiers for ion current measurement 390
Materials, brittle, lapping device for preparation of thin samples (N) 713
Materials, strength, for high-pressure apparatus 374
Melting point determination by detection of changes in light transmission (N) 167
Mercury level sensing device, photoelectric, for use in manometer (N) 439
Metal, internal friction of, computer calculation of strain dependence (N) 814
Metal, liquid, *see* Liquid metal
Metal, polycrystalline, Hall coefficient, accurate determination 465
Metal, thinning for transmission electron microscopy, twin-jet technique (N) 354
Metal strip, thin, pneumatic thickness-measuring device 495
Metal, *see also* Steel
Metallurgist, tools for, at Physics Exhibition 522
Meteorological rocket sonde 733
Microapplicators, high speed automatic (N) 350
Microbalance, torsion, *see* Torsion balance
Microdensitometer, automatic integrating 222
Microelectrode puller, electro-pneumatic (N) 723
Microelectronics, conference, Munich, October 1964 61
Micromanometer, null-reading, tilting U-tube, with rigid liquid container 677
Micrometer, optical, for use at high speed (N) 43
Microscope, field-ion, *see* Field-ion
Microscope objectives, high power, measurement of numerical aperture (N) 127
Microscope objectives, radial shear interferometer for test 102
Microscope stage sample compressor (N) 172
Microtechnology, method for making very accurate line patterns (N) 120
Microwave dielectric properties of weakly polar liquids, measurement 37
Microwave interferometer for measurement of small phase angles 225
Microwave spectrometer, Stark modulated, distortion of line shapes 236
Microwaves, Stark cell, electrical and mechanical properties 240
Millimetre wavelength, single-klystron superheterodyne receiver for 648
Miniaturization, *see* Microelectronics
Mirror mounts for experimental optical masers (N) 499
Mixtures, organic vapour, production in parts per million range by continuous slow injector 783
Modulation of light at extreme frequencies (L) 729
Moiré fringe reading head with constant reading gap 156
Moiré fringes, for measurement of surface slope 607
Molybdenum element furnace, power supply for (N) 663
Molecular pump, axial flow 876
Monochromator, crystal, for neutron radiography 540
Monochromator, x-ray, double-crystal (N) 504

Nephelometer, recording, for studies of bacterial growth (N) 664
Neutron dosimetry using gold and sulphur, calibration of GM counter 248
Neutron radiography using crystal monochromator 540
Nitrogen, liquid, *see* Liquid nitrogen
Nuclear–electron double resonance spectrometer, construction 675
Nuclear magnetic resonance measurements, automatic control of twin-T bridge 449
Nuclear magnetic resonance probe, high field, using transistors 653
Nuclear magnetic resonance spectrometer, 40Mc/s, conversion to 80Mc/s operation 669
Nuclear magnetic resonance spectrometer, variable temperature probe (N) 292
Nuclear radiation detectors, lithium-drifted silicon 862
Nuclear reactions, low energy, induced by charged particles, triggered cloud chamber for investigation 856
Nuclear resonance magnetic field self-locking strength meter for 11–65 Mc/s 865

Ohmic contacts, method of application to CdS crystals for Hall measurements (N) 51
Oils, lubricating, aeration meter for 425
Omegatron with liner orbit drift for improved resolution 492
Omegatron used as mass spectrometer 492
Omegatron, for measurement of partial pressures 737
Optical devices and lasers at Physics Exhibition 516
Optical filters, tunable, with narrow bandwidths 334
Optical glass, *see* Glass, optical
Optical transfer functions, measuring equipment 538
Optically flat surfaces, method of production (N) 911
Optics, interference and coherence, conference, Sydney, Australia, August 1964 1
Optics, photographic and spectroscopic, conference, Tokyo and Kyoto, September 1964 3
Optics in process control, conference, Manchester, January 1965 181
Oscilloscope, sampling, as coherent wide-band detector (N) 358
Oscilloscope, sampling, pulse height averager and recorder adaptor circuit for use with (N) 440

Partial pressures, measurement with omegatron 737
Particle counting and sizing, graticule for (N) 500
Particle size analysis, method of suspension in Coulter counter analyses (N) 711
Pendulum, double, Searle's apparatus, possible sources of error 14, corr. 174
Phase measurement at low frequencies, digital method 265
Phase separations, temperature-dependent, semi-automatic apparatus for study 708
Photocell, vacuum, for sensitive exposure meter (N) 168
Photoelasticity for detection of microcracking in concrete 276, (L) 509
Photographic films, *see* Films, photographic
Photographic optics, conference, Tokyo and Kyoto, September 1964 3
Photographic reproduction, method for making accurate line patterns (N) 120
Photography, monochromatic, in extreme ultra-violet 477
Photometry, amplifier for use with digital voltmeter (N) 434
Photometry, fast, low level, amplifier and pulse-counter for (N) 430
Photomultiplier linearity 597, corr. 912

Photomultipliers, use for measurement of light fluxes (N) 430
Physics Exhibition, instrument industry at 514
Piezoelectric vacuum vibrator as source of ions in mass spectrometer 136
Pipette, gas, all-metal, for use in mass spectrometry (N) 121
Pirani gauge, wide range, with ambient temperature compensation 77
Planimeter, airflow, Jenkins', modified construction 428
Plasma physics, high temperature, photography in extreme ultraviolet 477
Plasma probe measurements, statistical side to (N) 346
Plasmas, grazing-incidence spectrometer for, in range 5–950 Å 94
Polarimeter, Bendix NPL, jacketed cell for (N) 353
Polishing apparatus for ferrimagnetic spheres (N) 761
Polishing technique for producing optically flat surfaces (N) 911
Polymer solutions, dilute, measurement of flow birefringence over wide range of temperatures by rotor unit 880
Polymers, thin films, measurement of flexural rigidity 591
Powder diffraction, *see* X-ray powder diffraction
Power dissipation, local, thermometric method of measurement 90
Power supply for molybdenum element furnace (N) 663
Pressure balance for use at pressures of a few atmospheres 331
Pressure differences, small, measurement by multi-tube manometer 744
Pressure gauge, inclined-piston, for vapour pressure determination in 0·01–30 torr range 369
Pressure generation in tetrahedral anvil apparatus (L) 771
Pressure measurement in 0·01–30 torr range with inclined-piston gauge 369
Pressure measurement, *see also* Manometer, Pirani gauge, Toepler pump
Pressure recorder, high resolution (N) 759
Pressure regulation in column chromatography (N) 296
Pressure tappings, removal of burrs (N) 503
Pressure transducer for study of wake geometry 497
Pressures, above atmospheric, large capacity circulation pump (N) 818
Pressures of gases and fluids, tandel for measurement 252
Pressures, high, *see* High pressure
Pressures, partial, measurement with omegatron 737
Pressures, ultra-high, modified stepped-piston device (N) 714
Pressurizing of small systems with pure helium (N) 46
Probe, Langmuir, *see* Langmuir probe
Probe, nuclear magnetic resonance, high field, using transistors 653
Probe, magnetic, response measurement by transistorized method 147
Probe, variable temperature, for nuclear magnetic resonance spectrometer (N) 292
Probe measurements, plasma, statistical side to (N) 346
Process analyser, infra-red, based on interference filters 526
Process control, use of helical spring in (N) 287
Process control, optics in, conference, Manchester, January 1965 181
Process and product control in textile industry, instrumentation (Exhibition discourse) 557
Programme temperature controllers, method of scribing cams for (N) 54
Programmed controller, automatic, for sequential laboratory operations 650
Programmer for slow cooling (N) 770
Psychrometers, thermocouple, with outputs up to 30 μv, automatic scanning 777
Pulse height averager and recorder adaptor circuit for use with sampling oscilloscope (N) 440
Pulse-lengthening circuits (N) 169
Pump, axial flow, molecular 876
Pump, circulation, glass centrifugal, and gas saturator for liquids (N) 662
Pump, circulation, large capacity, for systems above atmospheric pressure (N) 818
Pump, continuous metering, with flow range of 1–55 ml. h^{-1} 33
Pump, flow inducer, use in deaerated systems (L) 446
Pump, gas circulation (N) 444
Pump, *see also* Toepler pump
Pyrometer, contact, for measurement of specimen temperatures on thermobalance (N) 507

Radiation detectors *see* Nuclear radiation detectors
Radiation thermopiles, spectral response 243
Radiometer, wavelength-independent, direct-reading 699
Raman spectrophotometer, *see* Spectrophotometer, Raman
Random events, synchronous slave device for timing (N) 443
Range finder, laser, *see under* Laser
Ratemeter, linear, for crystal pulling 153
Ratemeter, linear, response time distortion of output data 838
Ratemeter, nonlinear, analytical and experimental determination of response 842
Reactors, advanced gas-cooled, calorimeter for graphite dose rate 576, corr. 773
Receiver, superheterodyne, single-klystron, for use at millimetric wavelengths 648
Recorder, coordinate, for log current density–potential curves (N) 294
Recorder, multichannel potentiometric, integrator for 615
Recording device for manually operated ultra-violet spectrophotometer 403
Reflectometer, infra-red, with spheroidal mirror 385
Resin, epoxy, *see* Epoxy resin
Resistance thermometry, *see* Thermometry
Resistivity measurements, four-probe method (N) 283
Resistivity measuring circuits using chopped direct current (N) 432
Response, linear, of photomultiplier 597, corr. 912
Rigidity, flexural, of thin polymer films, measurement 591
Ring balance, Sucksmith, improvements 328
Rotor unit for measuring flow birefringence over wide temperature range 880

Safety shutter for Philips x-ray tube shield (N) 763
Sample holder, torsion balance, for magnetic anisotropy measurement (N) 760
Samples, thin, of highly brittle materials, lapping device for preparation (N) 713
Saturation characteristics of spherical ionization cum vacuum chamber 800
Saw, electrolytic, for cutting metal and ionic single crystals 631
Sawyer and Tower circuit, modified for investigation of ferroelectric samples 696
Scintillator, plastic, for airborne monitoring of ground radioactivity (L) 772
Scribing of cams for programme temperature controllers (N) 54
Semiconductors, resistivity measurement, modified method (N) 432
Servo-amplifiers for ion current measurement in mass spectrometry 390
Shock tube diaphragms, breaking by electrical method (N) 901
Shock tubes, bursting of diaphragms in 381
Shock tubes, method of mounting silica windows (N) 44
Signal-to-noise ratio, methods for improvement 470
Signal-to-noise ratio, method of improvement, using phase-sensitive detector 474
Size distribution, graticule for measurement (N) 500
Sky scanner for recording brightness distribution of sky (N) 903
Slave device, synchronous, for timing random events (N) 443
Slit, uniform, production by electro-erosion of razor blades (N) 825
Slurry presenter, x-ray fluorescence, insensitive to solids concentration (N) 817
Solenoid, superconducting, transistor sweep circuit for (N) 293
Solids, thermal conductivity measurements, semi-absolute method 702
Solutions, volatile, freezing point cell for (N) 665
Sonde, rocket, for measuring atmospheric temperature 733
Specific heat measurements, between 0·4 and 4·2°K, ^{3}He cryostat for 421
Specimen manipulator, universal motion, for use with ultra-high vacuum system (N) 887

Specimen stage and airlock for demountable electron optical systems (N) 898
Spectra, emission, photographic film for recording 116
Spectra, electron spin resonance, double integration of (N) 769
Spectral lines, emitted by plasmas, interferometer for detection of small shifts in wavelength 829
Spectral response of radiation thermopiles 243
Spectral transmission of optical glass, accurate measurement 746
Spectrometer, electron spin resonance, automatic frequency control for X-band reflex klystron (N) 442
Spectrometer, electron spin resonance, 80 Mc/s, for aqueous samples (N) 505
Spectrometer, electron spin resonance, temperature regulating system for (N) 904
Spectrometer, electron spin resonance, 300 Mc/s 395
Spectrometer, grazing-incidence, for use in range 5–950 Å 94
Spectrometer, high temperature modification (N) 756
Spectrometer, infra-red, SP100, extension of grating range (N) 352
Spectrometer, microwave, Stark modulated, distortion of line shapes 236
Spectrometer, nuclear–electron double resonance, construction 675
Spectrometer, nuclear magnetic resonance, 40Mc/s, conversion to 80Mc/s operation 669
Spectrometer, nuclear magnetic resonance, variable temperature probe (N) 292
Spectrometer, scanning, electrometer amplifier for (N) 126
Spectrometer, x-ray, *see* X-ray spectrometer
Spectrophotometer, infra-red, drying apparatus for cells (N) 164
Spectrophotometer, Raman, high performance 849
Spectrophotometer, ultra-violet, manually operated, auxiliary device for recording 403
Spectroscopic optics, conference, Tokyo and Kyoto, September 1964 3
Spectroscopy, atomic absorption, adjustable atomizer for (N) 816
Spectroscopy, microwave, new design for Stark cells 240
Spectroscopy, systematic errors due to atmospheric absorption 418
Spectroscopy, ultra-violet, extreme, monochromatic photography at 477
Springs, helical, use as valves in fluid operated control and measuring devices (N) 287
Statistical aids to plasma probe measurements (N) 346
Steel, determination of temperature of onset of martensitic transformation, technique 111
Strain rate in tensile machines, method to obtain constancy (N) 725
Streak camera, *see* Camera
Stress in tensile machines, method to obtain constancy (N) 725
Stress relaxation, in adsorbed surface films, measurement of (N) 762
Strontium, x-ray filters (N) 754
Superconducting coil, 30 kG, 8½ in. bore (L) 913
Superconducting computer devices, conference, London, December 1964 133
Superconducting magnet using double Helmholtz coils (N) 766
Superconducting solenoid, transistor sweep circuit for (N) 293
Surface preparation, Si–Fe, for domain examination (N) 170
Surface slope measurement by means of moiré fringes 607
Suspensions, density determination by nephelometer (N) 664
Switch, fast electronic, for improvement of signal-to-noise ratio 470
Switch, sealed, for operation in gases or under water (N) 506
Switch, vacuum spark-gap triggered (N) 659
Switching device, current (N) 659
Syringe, micrometer, high speed automatic (N) 350
System, reacting, with gas component, aneroid semi-micro calorimeter 186

Tandel, sensitive element for measuring thermal conductivity, pressure and velocity of gases 252
Tappings, pressure, removal of burrs (N) 503
Teaching, apparatus and experiments for 520
Temperature calculation, in platinum resistance thermometry, new method 203
Temperature control, between −190 and +500°c (N) 749
Temperature control systems, proportional 787
Temperature controller, linear proportional (N) 822
Temperature measurement in rotating-cylinder viscometers (N) 173
Temperature measurement of specimens on thermobalance, contacts pyrometer for (N) 507
Temperature regulating system for use with electron spin resonance spectrometer (N) 904
Temperature regulating *see also* Thermostat
Temperatures, high, *see* High temperatures
Tensile machines, constant stress and strain rate modifications (N) 725
Tensile testing, liquid-air cryostat for 705
Tension, low frequency sinusoidal fatigue testing, apparatus 273
Textile industry, instrumentation in process and product control (Exhibition discourse) 557
Thermal conductivity of gases and fluids, tandel for measurement 252
Thermal conductivity, series comparative measurements (N) 910
Thermal conductivity measurements on solids, semi-absolute method 702
Thermal detectors, *see* Bolometers
Thermal measurements, *see* Calorimeter
Thermally controlled air volume, electrical analogue 787
Thermistor circuit for measurement of temperature deviations (N) 42
Thermistors, multiple-thermistor indicator for thermometric analysis 35
Thermistors, single crystal SiC, for low pressure measurements (N) 342
Thermocouple for measuring local power dissipation in electrical equipment 90
Thermocouple psychrometers, with outputs up to 30 μv, automatic scanning 777
Thermocouple wire, metal sheathed, small diameter, technique for stripping (N) 815
Thermoelectric coolers, modification of quartz container used in preparing materials (N) 55
Thermoelectric properties, measurement at high temperatures 209
Thermojunctions, method of application to CdS crystals (N) 51
Thermometer, suppressed-zero (N) 42
Thermometers, thin film, miniature, with rapid response 791
Thermometric analysis, multiple-thermistor indicator for 35
Thermometry, platinum resistance, new method for computation of temperature 203
Thermopiles, radiation, spectral response 243
Thermostat, oven, with phototransistors (N) 909
Thermostat, precision, using circulating liquids (L) 363
Thickness-measuring device, pneumatic, for soft-metal strip 495
Thin film thermometers, miniature, with rapid response 791
Thin films, *see* Films, thin
Thinning, *see* Electro-thinning
Tidal gravity recording, with Heiland gravity meter, photo-transistor transducer for 140
Time-dependent systems, correction of response time distortion 838
Timer, photoelectric, for bubble meter method of gas flow measurement (L) 175
Timing device, photoelectric, for use with viscometers (N) 751
Toepler pump for microvolumetric determination 28
Torsion balance to detect force of 2×10^{-8} dyn 150
Transducer, phototransistor, for tidal gravity recording with Heiland gravity meter 140
Transducer, pressure displacement, use of helical spring as (N) 287
Transducer, variable frequency, for gauging liquid depth and tank content 545
Transducers and electronic devices at Physics Exhibition 517
Transfer functions, optical, measuring equipment 538
Transient, current, *see* Current, transient
Transistor circuit for lengthening pulses (N) 169
Transistorized circuit for response measurement of magnetic probe 147

Transistors, use in high field nuclear magnetic resonance probe 653
Transmission, spectral, *see* Spectral transmission
Tritium, counting with thin-windowed Geiger–Müller counter tube (N) 906
Tungsten cathodes, *see* Cathodes, tungsten
Turbulence in salt water jet, mean conductivity meter for (N) 163

Ultra-high pressures, modified stepped-piston device (N) 714
Ultrasonics and acoustics at Physics Exhibition 519
Ultra-violet, extreme, monochromatic photography in 477
Ultra-violet spectrophotometer, *see* Spectrophotometer, ultra-violet

Vacuum arc initiation, device for study (N) 284
Vacuum balance, recording, inexpensive 109
Vacuum chamber, irradiated, spherical, for study of saturation characteristics 800
Vacuum evaporation rate, control by use of constant source current 144
Vacuum gauge, absolute, rotating sphere 105
Vacuum spark-gap switch, triggered (N) 659
Vacuum system, ultra-high, specimen manipulator for (N) 887
Vacuum techniques, *see* Toepler pump
Vacuum valve, pumpable, for sealed-off metal cryostats (N) 724
Vacuum, *see also* Low Pressure
Valve, polytetrafluoroethylene, pneumatically operated (N) 40
Valve, thermally operated, for automatic liquid nitrogen refill systems (N) 128
Vapour mixtures, low concentration, production by continuous slow injector 783
Vapour pressure determination, inclined-piston pressure gauge 369
Vapours, corrosive, P.T.F.E. valve for remote control (N) 40
Vapours, polar, detector based on thermal modulation of contact potential 624
Velocity of gases and liquids, tandel for measurement 252
Velocity meter, cold tip (N) 657
Velocity selector, magnetic, for hydrogen atom beams 489
Vibrations, *see* Displacements
Vibrator, piezoelectric vacuum as source of ions in mass spectrometer 136
Viscoelasticity of films, stress relaxation apparatus for measurement (N) 762
Viscometer, coaxial cylinder, for use under oscillatory and transient conditions 569
Viscometer, Ferranti–Shirley, viewing sample fracture in (N) 162
Viscometer, Ostwald, effects of tilting on flow time 317
Viscometer, photoelectric (N) 751
Viscometer, recording rotational, in glass-laden Teflon 628
Viscometer, rotating-cylinder, temperature measurement in (N) 173
Voltage, a.c., overload indicator (N) 50
Volatile solutions, freezing point cell for (N) 665
Voltmeter, attracted-disk, direct reading absolute 618
Voltmeter, digital, amplifier for use with (N) 434
Voltmeter incorporating electrometer (N) 655
Volumetric determination of gases, microvolumetric device 28

Wake geometry, study with transducer 497
Water vapour, absorption by epoxy resin cement (N) 501
Wavelengths of spectral lines emitted by plasmas, interferometer for detection of small shifts 829
Wind velocity-component resolver 414
Wind, *see also* Anemometer
Wire, small diameter, metal sheathed thermocouple, technique for stripping (N) 815

X-radiography, fine focus high intensity medium energy x-ray source 86
X-ray camera, safety shutter and collimator coupling for use with tube shield (N) 763
X-ray cameras and tubes, vacuum-tight beryllium window (N) 39
X-ray diffraction, automatic integrating microdensitometer for 222
X-ray diffraction, orientation of single crystals, manipulating device 483
X-ray diffraction cameras, microbeam 337
X-ray diffraction cameras, use of toroidal reflecting surfaces in 312, abstract 544
X-ray diffraction photographs of fibre structures studied by optical-diffraction techniques 533
X-ray diffraction photographs of oriented single crystals at temperatures up to 1800°C (N) 658
X-ray diffractometer, four-circle, unsymmetrical and symmetrical assemblies 219
X-ray diffractometer, four-cycle, method of use 685
X-ray diffractometer, high temperature attachment for precision lattice parameter measurements 212
X-ray diffractometer, Norelco, low temperature attachment (N) 502
X-ray filters, balanced, statistical considerations in design 563
X-ray fluorescence analysis, slurry presenter insensitive to solids concentration (N) 817
X-ray microanalysis, electron probe, conference, Delft, September 1964 57
X-ray monochromator, double-crystal (N) 504
X-ray powder diffraction patterns, computer indexing (N) 171
X-ray source, medium energy, with fine focus and high intensity 86
X-ray spectrometer, Philips PW 1540, modification for non-dispersive analysis 480
X-rays, specimens, transparent to, quantitative diffractometric analysis (L) 298

Young's modulus measurements, Searle's double pendulum apparatus, errors in 14, corr. 174
